Duke University School of Medicine

Duke University Radiation Therapy Physics Residency Program

DukeHealth

What procedures do you perform?

Duke provides a **broad range of radiation treatment techniques**, from 2D/3D techniques to advanced radiation therapy techniques including image-guided radiation therapy, SRS/SBRT, IMRT, VMAT, TBI/TSI, IORT and electron beam therapy. Further, we have an **active brachytherapy program** providing high dose rate brachytherapy for gynecological, prostate and intraoperative sites; low dose rate brachytherapy for treatment of prostate cancer; and eye plaque brachytherapy for treatment of ocular melanomas.

What resources do you have?

Duke's Department of Radiation Oncology boasts an impressive array of resources. With **eight LINACs on the main campus**, and multiple satellite locations, residents are likely to participate in important clinical activities such as **LINAC commissioning**. Main campus includes the following Varian LINACs and HDR units as well as imaging equipment.

- 4 TrueBeams
- 2 TrueBeam Stx with HD MLCs, ExacTrac, 6D couch
- Philips Brilliance CT
- GE Discovery RT590
- Siemens Biograph mCT PET/CT
- BrainLab Airo Mobile CT
- Siemens 3.0T Skyra MR simulator
- 2 GammaMedPlus iX HDR afterloaders

Additionally, we have licenses for cutting edge software like VelocityAI, MIM, Brainlab iPlan and Varian Developer Mode.

What are resident responsibilities?

From the first day of the residency, **residents are valued members of our team** and are responsible for many clinical activities under the supervision of our faculty members:

- Patient specific QA (IMRT and VMAT, electron cutout measurements, and in-vivo dosimetry)
- Machine-specific QA (monthly & annual) for: External Beam Therapy and Brachytherapy; imaging equipment (MR, PET, CT, CT simulator)
- Heavily involved in clinical treatment planning for all treatment sites
- Weekly chart rounds

Training at Duke played a large role in shaping the kind of physicist I am today. I was given the opportunity to not only learn from **some of the most renowned physicists and physicians in radiation oncology**, but to collaborate with them and help **make a difference in patient care**. While the technology and special procedures speak for themselves, the style of teamwork and commitment to training residents is really what distinguishes the Duke residency program. I was provided with all of the necessary tools to become an independent and safe medical physicist and **I couldn't be more grateful for that experience**.

—Irina Vergalasova, PhD, Former Resident

What is the curriculum?

The residency program consists of the following clinical rotations covered in a 24-month training time:

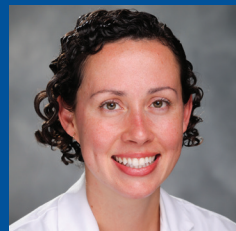

- Machine-specific and patient-specific quality assurance
- Linac acceptance and commissioning
- Treatment planning for 2D, 3D, IMRT and VMAT
- Stereotactic Radiosurgery and Stereotactic Body Radiation Therapy and Image Guided Radiation Therapy
- Brachytherapy for LDR and HDR sources
- Total Body Irradiation and Total Skin Irradiation
- Imaging for CT, US, PET/CT and MRI
- Radiation safety

Each rotation covers several training topics with multiple learning objectives. Each training topic is individually evaluated and summarized through a report, a competency assessment and an oral examination given by rotation supervisors and program directors. Rotation staff and examiners can provide formal feedback to program and resident on performance. Residents can provide feedback on the rotation to the program as well. Documentation of a resident's progress is maintained electronically.

Applicants are expected to have finished most or all of the courses (equivalency is determined by the residency program) prior to start of residency. The rest will be made up during residency. However, CAMPEP limits the number of makeup courses to two within the two-year clinical training period.

The didactic component of the program consists of a standard list of references for each rotation, weekly resident presentation series and participation in the AAPM Multi-institutional Residency Program Journal Club. Additionally, seminars include departmental weekly chart rounds, grand rounds and morning conference.

Duke provides a **well-structured, comprehensive and in-depth** radiation therapy physics training in a fast-paced and high-patient load academic setting. Our strong support of education, variety of resources and equipment and most importantly our exceptional staff and faculty are what make Duke unique. At graduation I am always so proud and impressed by the development of our residents into competent, independent and thoughtful medical physics professionals!

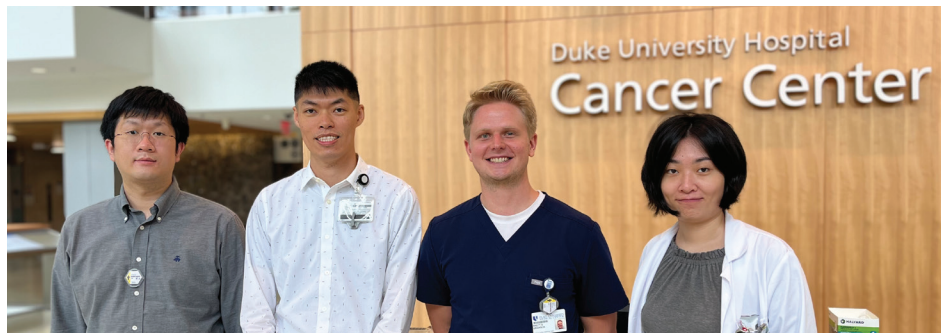

—Anna Rodrigues, PhD, Program Co-Director

Are there research opportunities?

Research is an integral component of our residency training. Our residents have research opportunities in both cutting-edge novel technology development and clinically-oriented projects, as well as working with radiation oncologists on clinical trials. Further, residents have resources and opportunities in other partner departments (radiology, computer science, biomedical engineering) for research collaborations.

Why Duke?

- Top-ten medical school and university
- Prestigious medical center
- Large and expanding practice (>150 patients/day)
- State-of-the-art equipment and advanced procedures
- Excellent teams of physicists, radiation oncologists, dosimetrists and therapists
- Research opportunities in various topics
- Travel funding for scientific meetings
- Excellent placement statistics
- Affordable and exciting life in the Research Triangle area

Duke Benefits

- Competitive compensation level with annual salary reviews
- Excellent benefits package including medical, dental and vision (four health plan options)
- Health and dependent care reimbursement accounts
- Retirement plan that allows you to build retirement savings by contributing before-tax and/or Roth after-tax payroll deductions
- Employee tuition assistance program
- Children's tuition grant program
- 14 paid holidays annually
- Paid vacation
- Paid sick leave
- Employee Assistance Program
- Free health, financial and other relevant seminars and workshops
- Paid parent leave and childcare resources
- Discounted rates for Duke Fitness Club program
- Vendor discounts, including automotive, fitness, entertainment, restaurant, theater, home improvement, sporting events, hotels, technology, travel and more
