Description of Program:

For those with a strong interest in becoming independent laboratory researchers, we have developed a novel program combining a Holman Pathway Residency with a post-residency mentored research instructorship position that can last up to 2 years. We recognize that it can be challenging for radiation oncology trainees to obtain sufficient mentored research training. The goal of this novel program is to provide trainees with sufficient time to develop skills and publish manuscripts, while they create an individualized scientific niche, to facilitate the successful transition to independence in a lab-based research career.

Therefore, we are interviewing applicants for the Duke Radiation Oncology Research Scholar (RORS) track, which is being developed to fill an unmet need in radiation oncology training. This NEW residency position will be offered through a SEPARATE MATCH and will offer 27 months of clinical training and once clinical competency is achieved up to 21 months of mentored research during residency. Then, after residency there will be an opportunity to continue research for an additional 24 months as an Instructor with a well-defined focused clinical commitment (i.e. seeing patients 1 day per week) and with MARKET RATE compensation.

Thank you for your interest in this program. Please complete the following secondary application so that we may better understand your future plans. Please use as much room as necessary.

1. Describe your research performed to date and its impact.

2. Describe your future career plans and goals. In addition, please indicate any particular research or clinical interests you may have developed at this point of your training.

3. List your prior grant support if any:

<table>
<thead>
<tr>
<th>Agency</th>
<th>Number (if applicable)</th>
<th>Type or Level</th>
<th>Date Begun</th>
<th>Date Terminated</th>
</tr>
</thead>
</table>

4. List any individuals that you may wish to meet during your visit to Duke.

5. Please list Duke Faculty (in any School/Department) that you think would be a good Mentor for you and explain why.

6. Please list your Ph.D. mentor or research supervisor whom you have requested a letter of recommendation. If your Ph.D. mentor or research supervisor did not submit a letter of recommendation with your ERAS application, please request that this person send a letter to Wanda Gentry at the email address below.

Upon completion of this application, please e-mail it by October 5, 2018 to the Radiation Oncology Residency Coordinator with the Subject Title: New RORS Application:

If you need a word document format of this application please let us know.
